

# RNTCP Performance Report, India

## Fourth Quarter, 2003

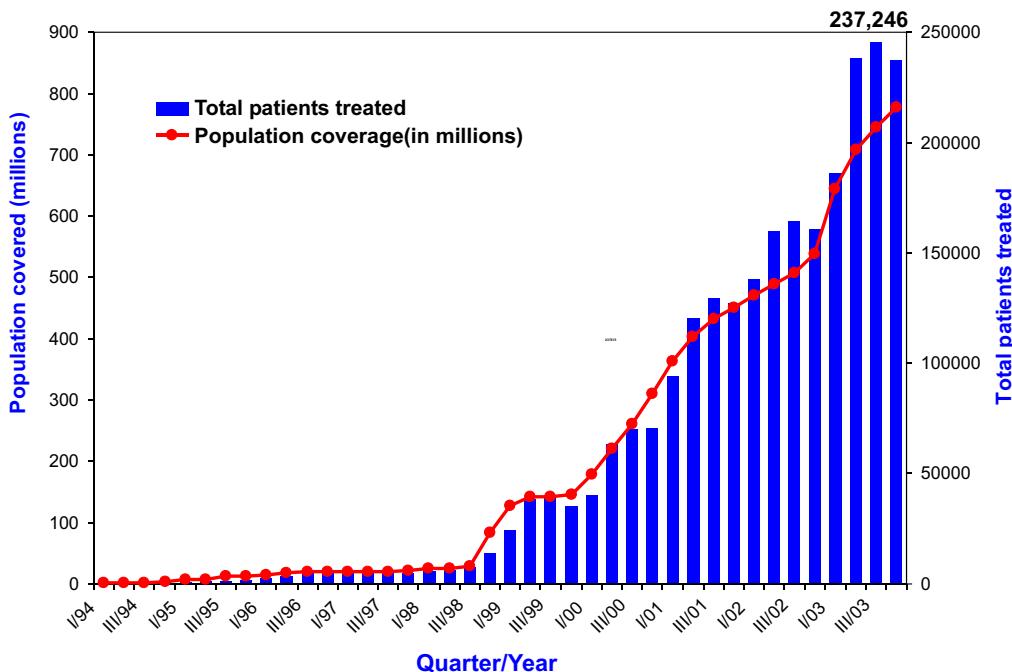

### District-wise RNTCP implementation status

Type of districts / reporting units	No. of districts / reporting units	Population as per 2001 Census	Projected population (in million) *
Implementing	431	750	778
Appraisal done	14	20	21
Ready for appraisal	8	19	20
Preparing	175	238	249

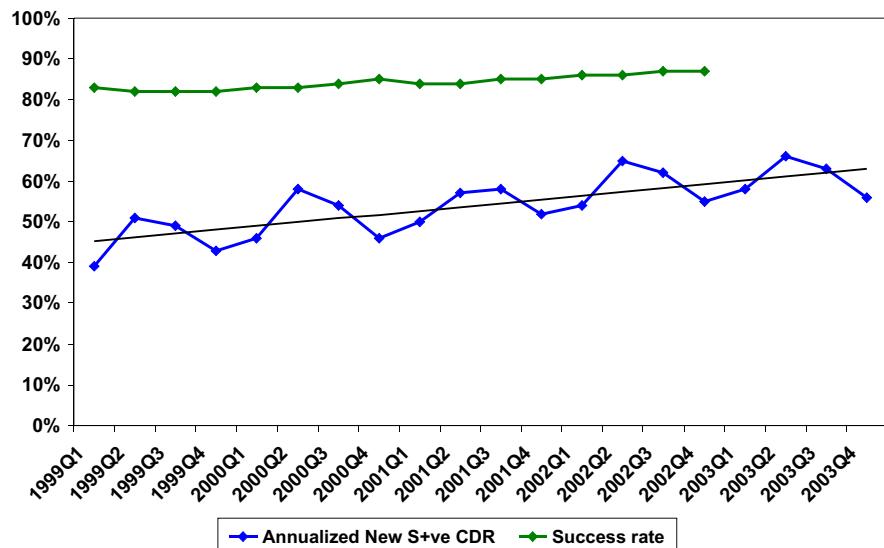

\* 2003 projected population based on 2001 census.

## Population in India covered under DOTS and total tuberculosis patients put on treatment each quarter

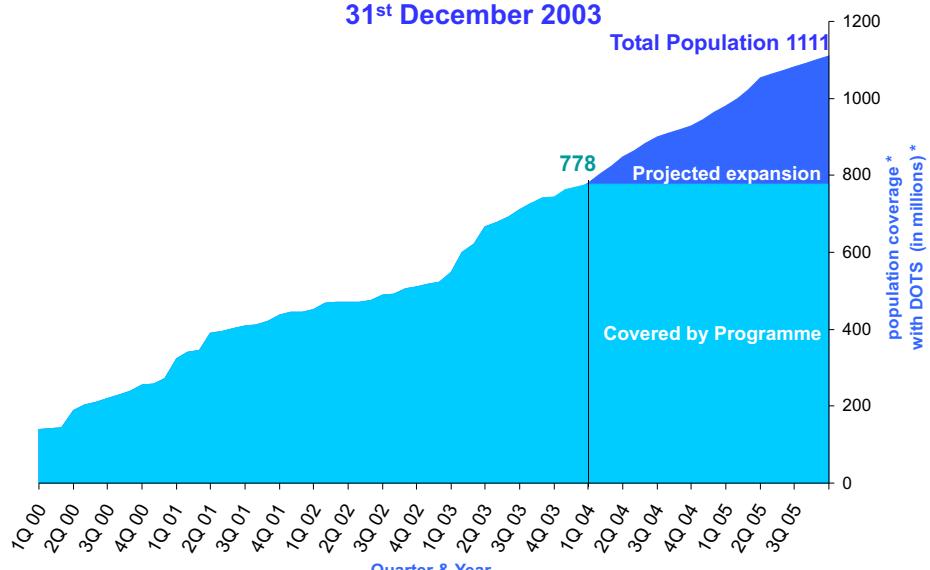

## India: Annualized new smear positive case detection rate and success rate, 1<sup>st</sup> quarter 1999 to 4<sup>th</sup> quarter 2003 \*

## Multiyear DOTS expansion plan for India \*

31<sup>st</sup> December 2003

\* All figures and data in this report use standard GOI Census Bureau methodology to project the population. Population is projected from 2001 census.

## Achievements in DOTS Expansion during the 4 Quarter 2003

Dear Colleagues,

We have continued to accomplish a number of significant achievements during 4<sup>th</sup> quarter with your efforts and contribution.

### **Expansion of RNTCP**

By December 2003 the coverage has increased from 744 million population to 778 - an addition of 34 million in three months. DOTS services are available to people in 431 districts of 27 States and Union Territories by the end of Dec 2003. 14 more districts (20 million population) have been appraised and ready for service delivery.

### **Performance**

The case detection rate for this quarter is 56% and 2,37,246 patients were put on treatment. More than 9 lakh patient have been put on treatment in this year - largest than any other country in the world. The success rate continues to be high and 87% of the new smear positives registered in 4<sup>th</sup> quarter 2002 were successfully treated under DOTS. The sputum conversion rate and cure among the new sputum positives was 89% and 86%, respectively.

### **Strengthening of monitoring & supervision**

Regular review meeting on performance of RNTCP at state level has been ensured. STOs' meeting to review the performance of RNTCP was held in New Delhi in October 2004. The review meetings at the state level were held to review of the performance of RNTCP at the district level. These review meetings have been attended by the representatives from Central TB Division in the North Eastern region, West Bengal, Punjab, Andhra Pradesh, Gujarat, Uttar Pradesh, Maharashtra, Tamil Nadu, and Himachal Pradesh.

### **Collaboration with other sectors**

India has one of the largest **private health care** sectors in the world, with an estimated 8 million private practitioners. RNTCP has made a concerted effort to develop partnerships with the private health sector and NGOs, in order to widen access to quality TB care. To date, more than 3000 private practitioners and 750 NGOs are officially providing RNTCP services.

Meeting of **National Task Force for involvement of Medical colleges** in RNTCP was held in Delhi on 22<sup>nd</sup> Nov. 2003 to review the progress made in this year and prepare action plan for the next year.

131 medical colleges out of 180 are collaborating with RNTCP in the implementing districts. The results of this collaboration are promising.

**Pediatric Workshop** was held to in August in New Delhi to arrive at consensus and develop guidelines for diagnosis, treatment and monitoring of pediatric TB. The participants in this evidence-based consensus meeting included national and international pediatricians and TB experts, and TB control programme managers.

The government of India has successfully involved the **Ministry of Labour, Railways, Mines and Steel** by issuing directives to their respective health establishments in adopting the DOTS strategy as the standardized treatment for TB patients. This is necessary for creating an epidemiological impact, as all the cases will have uniform treatment with uninterrupted good quality drugs. In Kerala, all the 18 ESI hospitals have been identified as microscopy centres and 125 dispensaries as DOT Centres. The ESI department has stopped the purchase of anti-TB drugs and is implementing RNTCP exclusively. Similarly, in West Bengal, 9 out of 14 ESI hospitals have been involved in RNTCP.

South Eastern Railways has started RNTCP from April 2003. Eastern Railways in Howrah in West Bengal runs a microscopy centre for staff of 10,000 at Liluah.

### **Important forthcoming Event**

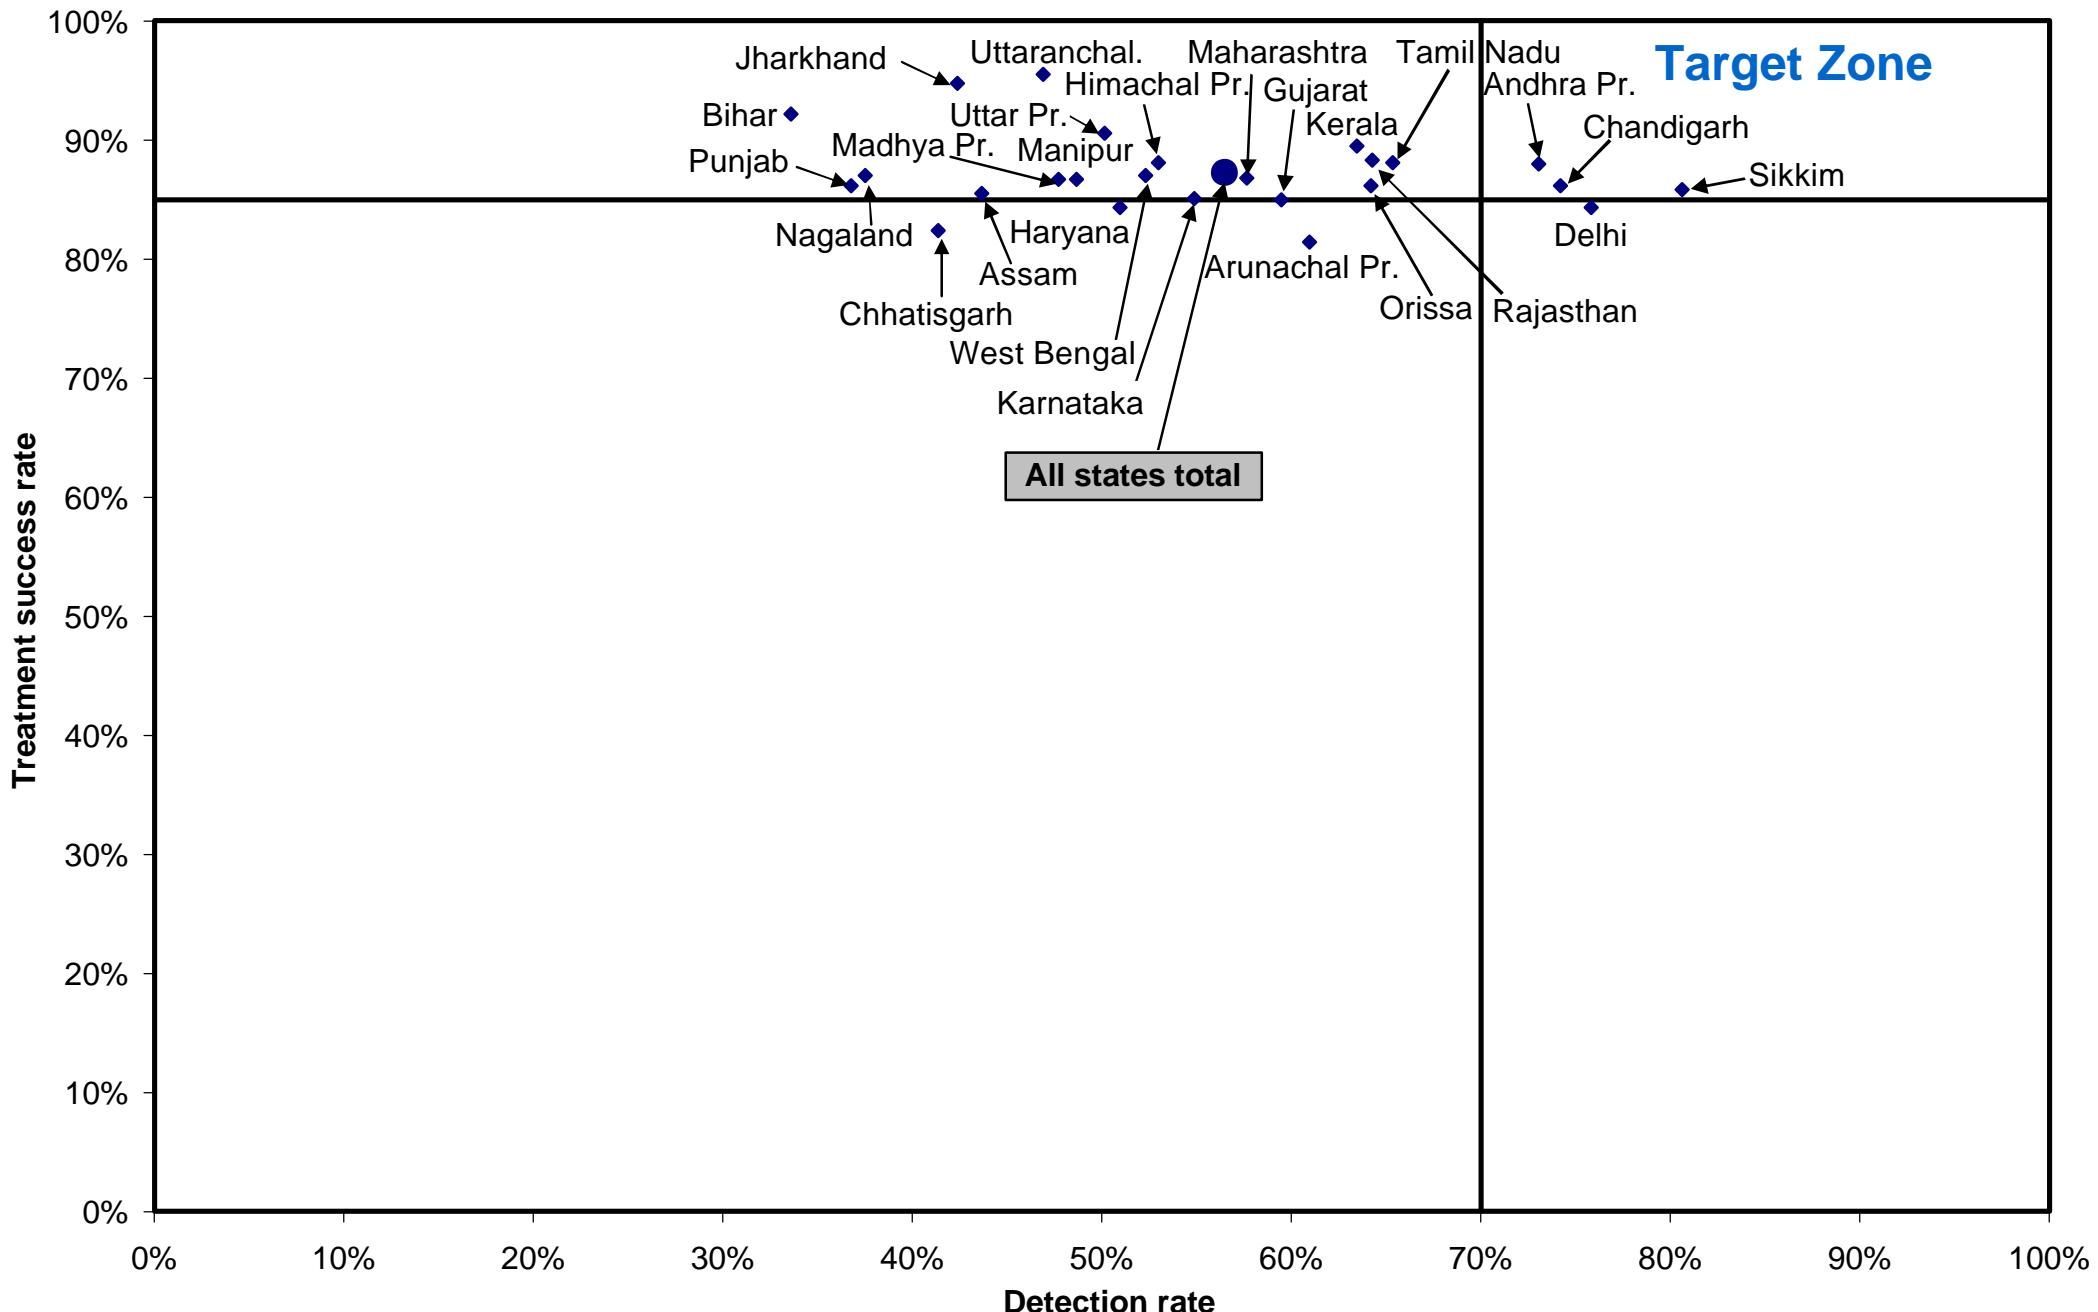

**2<sup>nd</sup> Stop TB Partners Forum on 24-26<sup>th</sup> March 2004**

The 2<sup>nd</sup> Stop TB Partners Forum will now be held on 24-26<sup>th</sup> March 2004 in New Delhi. Ministerial delegates from 22 high TB Burden Countries, including Ministers of Health and Finance are expected to attend the meeting. The Ministry of Health and Family Welfare is hosting the Forum. It has been planned to use this opportunity to showcase RNTCP. India has the fastest expanding TB control programme in the world. Besides highlighting this during the forum, involvement of community in TB control would be recognized. DOT Providers from the different parts of the country would be facilitated for their contribution to success of RNTCP. An exhibition, administration of last dose to 3 millionth patient are other events that are planned during the forum.

*With the contribution from all of you, we have made rapid expansion. The RNTCP services are now available to 75% of the population in the country and we are working towards covering the whole country by 2005. There has been continuous progress in case detection and cure rates. Every effort is being made at central, state and district level to keep up the qualitative and quantitative performance of the programme. We are aware of the challenges that lie ahead but we are determined to reach our target through strengthening of monitoring and supervision, collaboration with other sectors and your dedication and cooperation.*

Dr. L. S Chauhan, DDG (TB)  
Directorate General of Health Services, MOHFW

## Case-detection and treatment success rates in RNTCP areas for fourth quarter 2003/2002

**Performance of RNTCP Case Detection (2003, fourth quarter), Smear Conversion (2003, third quarter),  
and Treatment Outcomes (2002, fourth quarter)**

NR - Not reported till 16th Feb 2004; Values for grey areas are not expected

\* Projected population based on census population of 2001 is used for calculation of case-detection rate. 1 lakh = 100,000 population

† Annualized case detection rate totals based on districts implementing for more than one quarter. Estimated total new smear-positive cases adjusted for available data on Annual Risk of Infection (ARI)

for Kerala (estimated new smear positive cases=50/lakh), Himachal Pradesh (estimated new smear positive cases=115/lakh) and Manipur (estimated new smear +ve cases 100 per lakh). For all other states, estimated total new smear-positive cases=85/lakh. Percentage reflects proportion of expected cases detected (e.g. 70% = 60/85 cases per lakh, 70% = 81/115 cases per lakh)

§ Smear conversion rate not expected for states that began implementing RNTCP during 3rd quarter 2003

¶ Cure rate and success rate are not expected for states that began implementing RNTCP after 4th quarter of 2002

NR - Not reported till 16th Feb 2004; Values for grey areas are not expected

\* Projected population based on census population of 2001 is used for calculation of case-detection rate. 1 lakh = 100,000 population

† Annualized case detection rate totals based on districts implementing for more than one quarter. Estimated total new smear-positive cases adjusted for available data on Annual Risk of Infection (ARI) for Kerala (estimated new smear positive cases=50/lakh), Himachal Pradesh (estimated new smear positive cases=115/lakh) and Manipur (estimated new smear +ve cases 100 per lakh). For all other states, estimated total new smear-positive cases=85/lakh. Percentage reflects proportion of expected cases detected (e.g. 70% = 60/85 cases per lakh, 70% = 81/115 cases per lakh)

‡ Smear conversion rate not expected for districts that began implementing RNTCP during 3rd quarter 2003

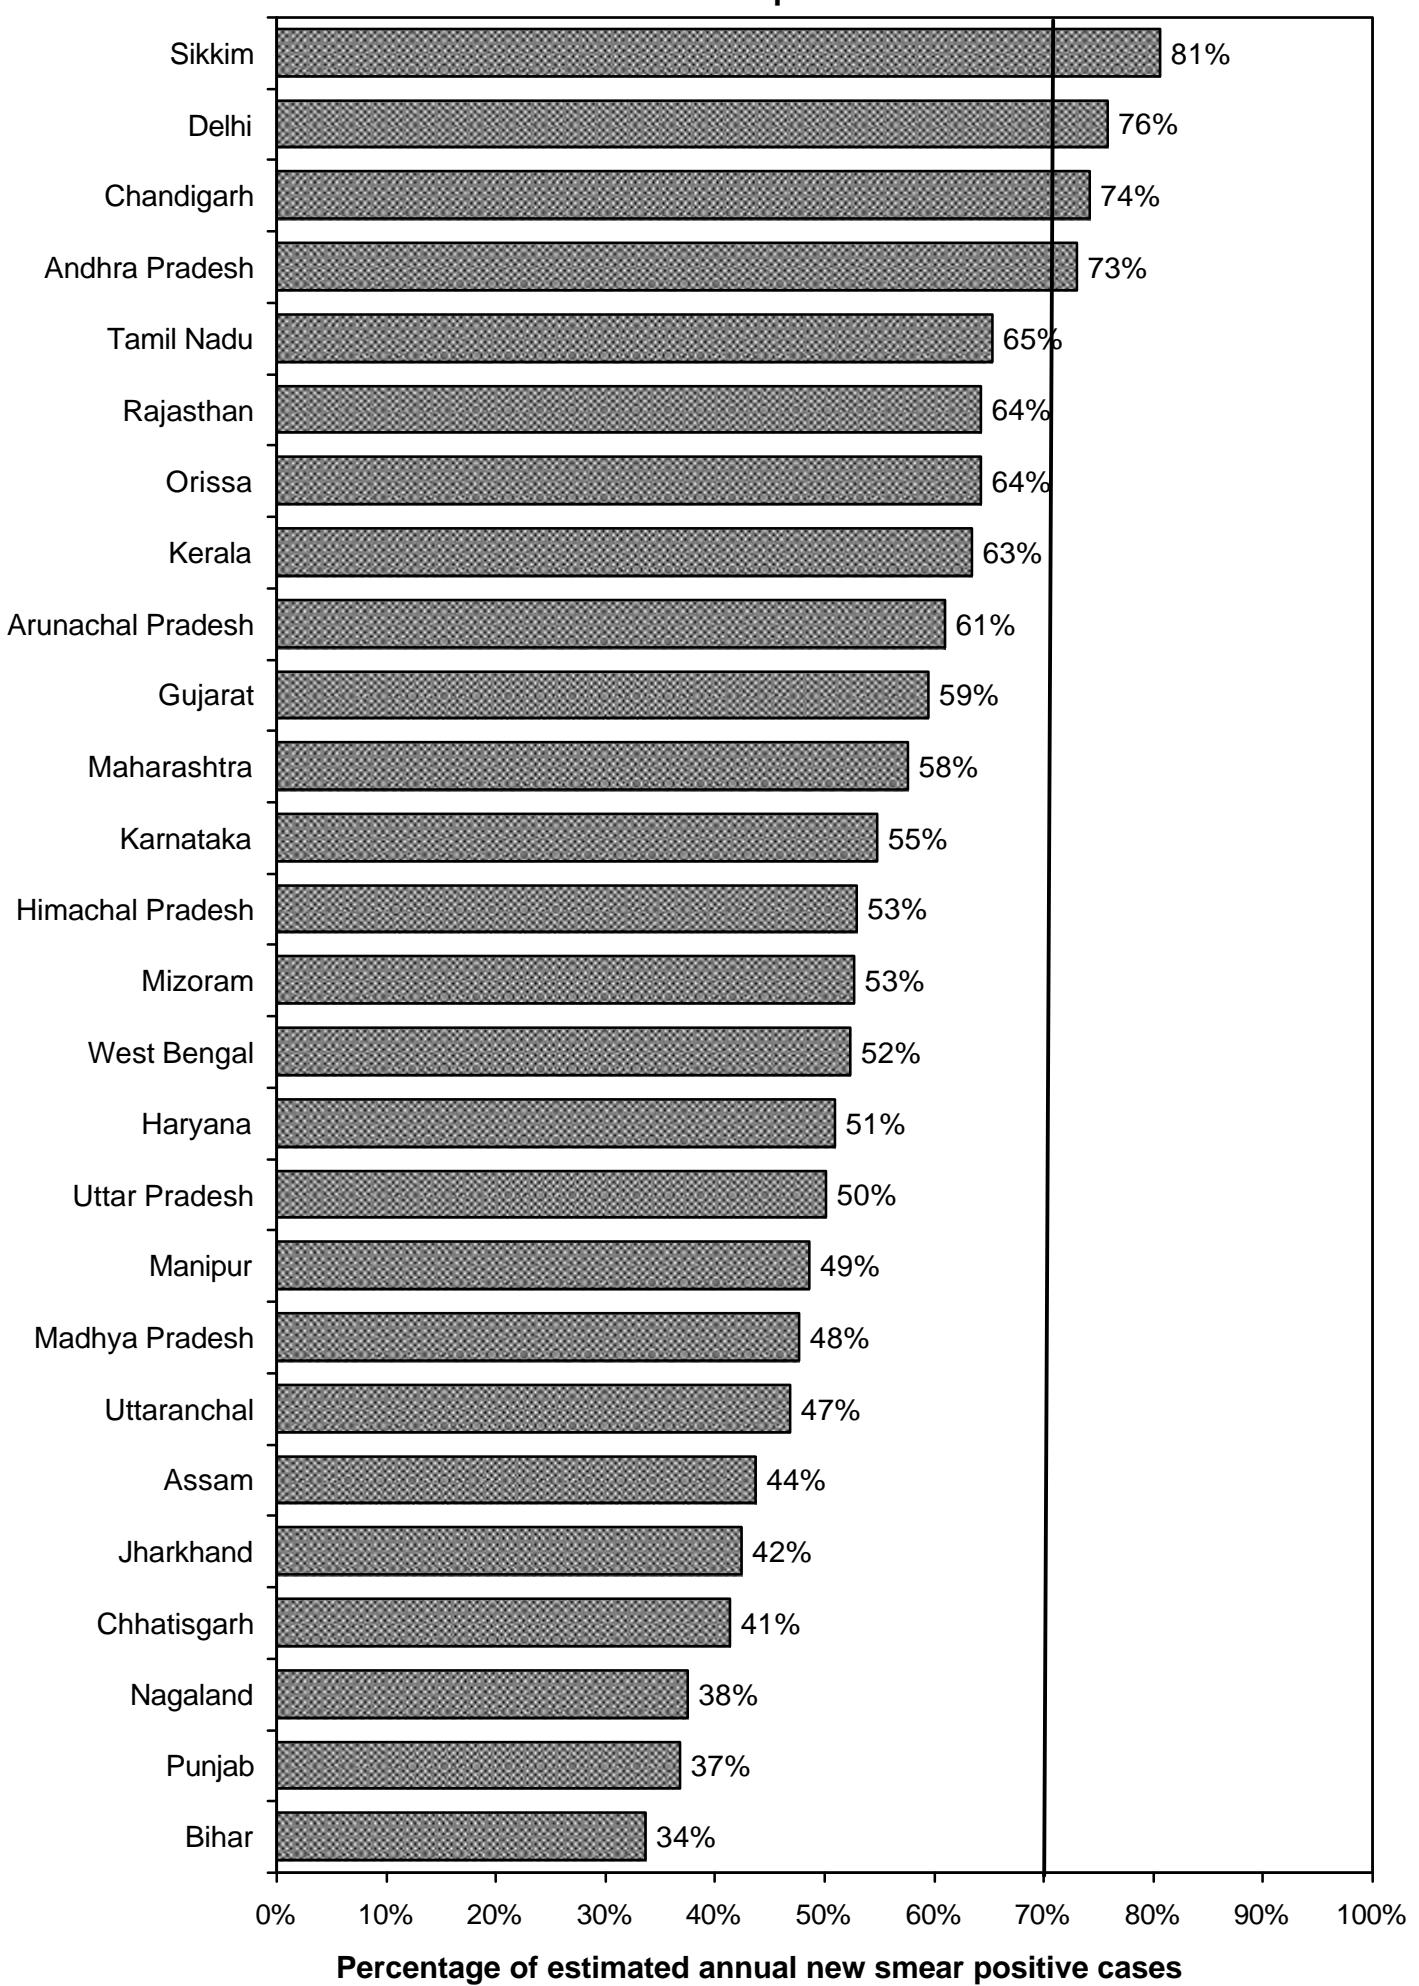

§ Cure rate and success rate are not expected for states that began implementing RNTCP after 4th quarter of 2002

## Quarterly report methodology

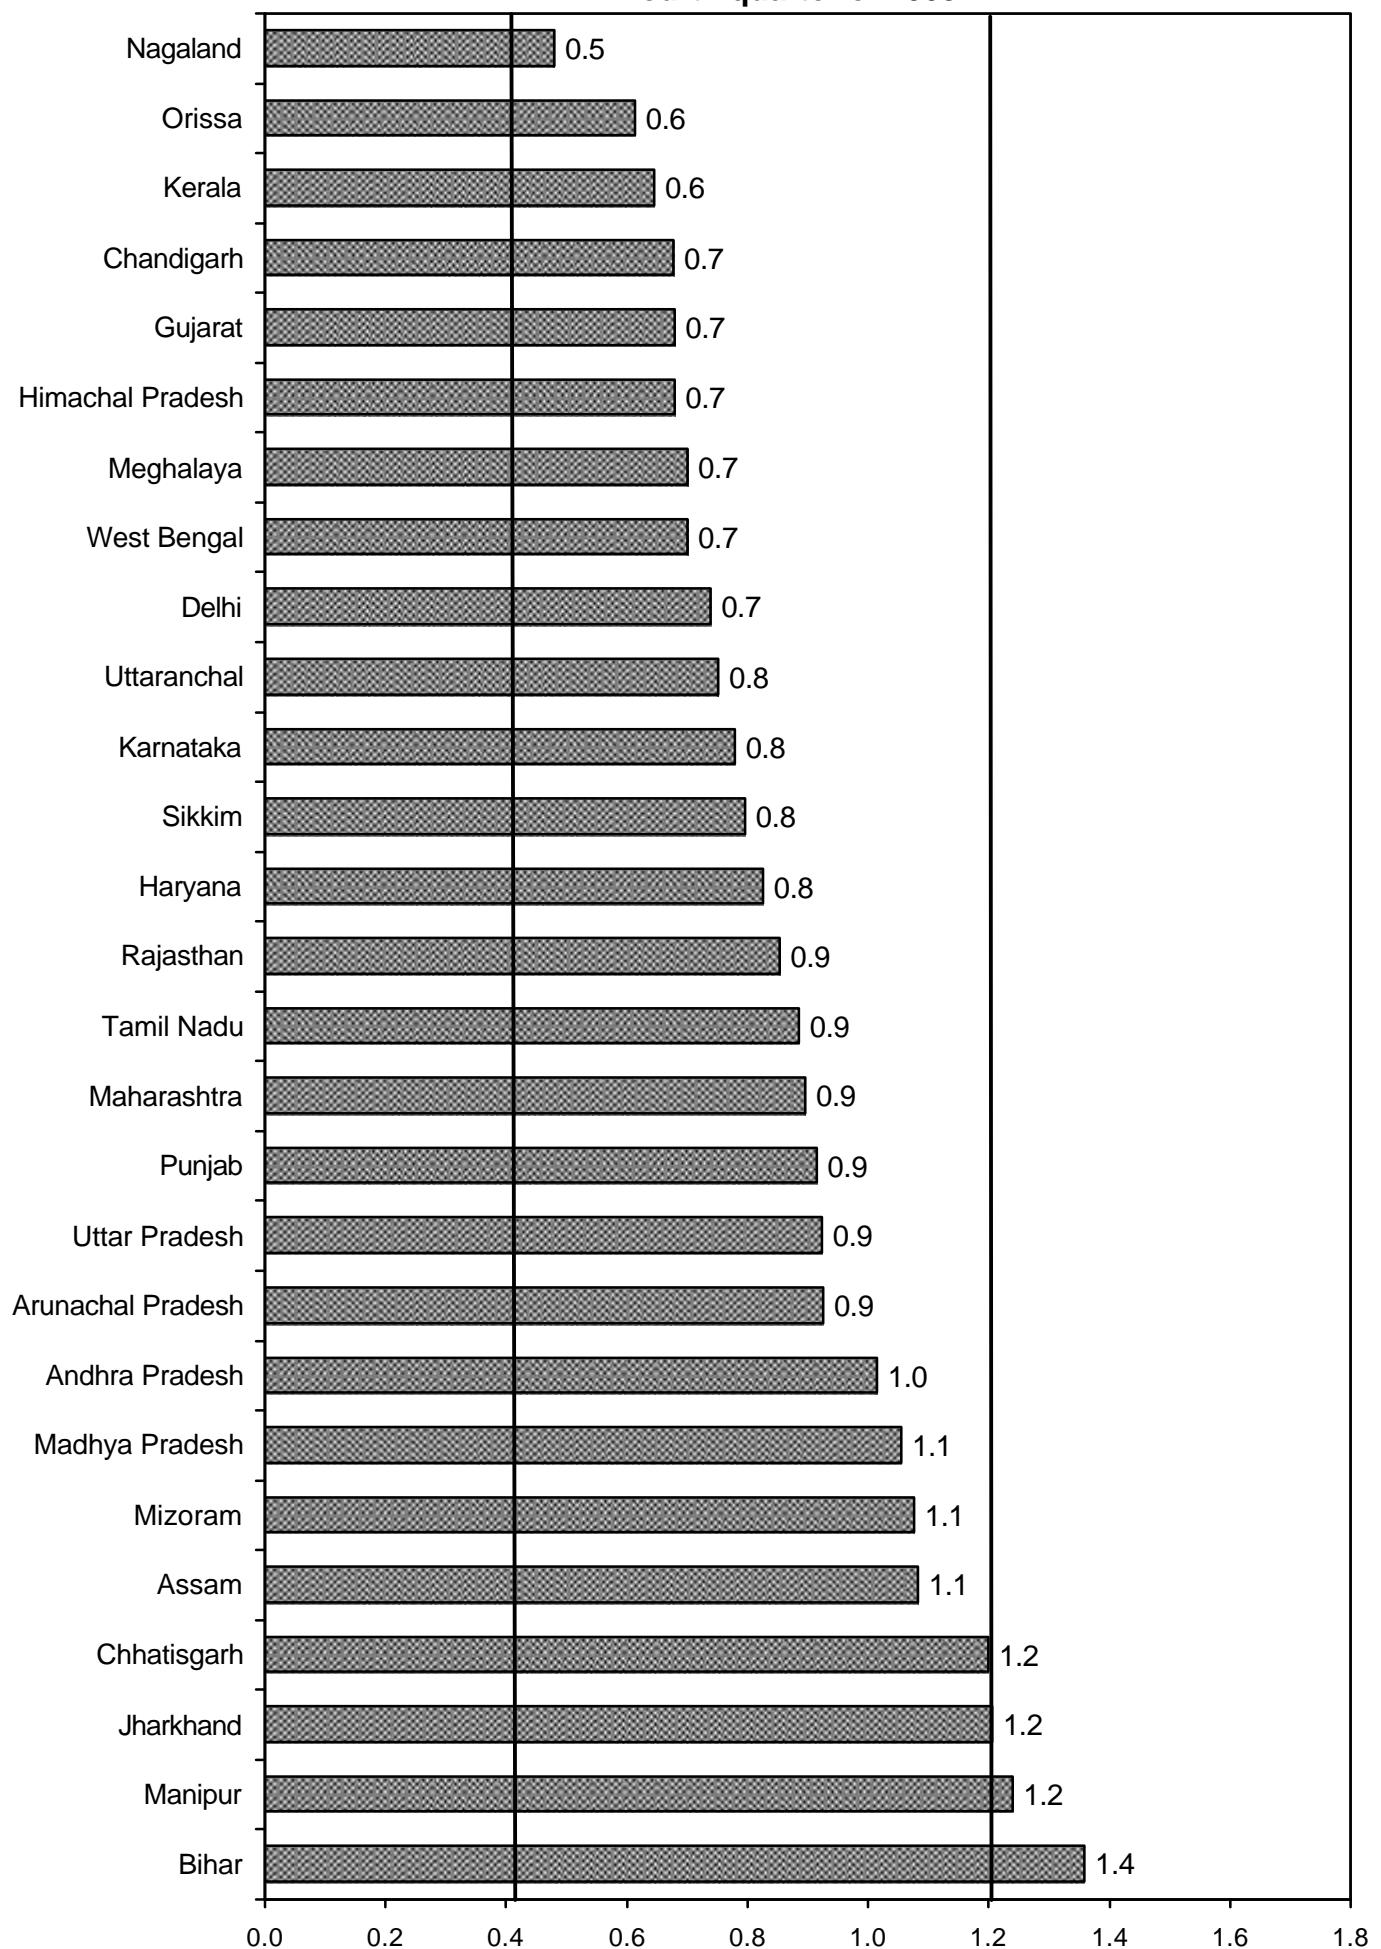

Column Heading in RNTCP Performance Report	Formula	Conditions for formatting
Outpatients examined No.(%)	No. = No. of new adult OPD patients whose sputum was examined  % = No. of new adult OPD patients whose sputum was examined / No. of new adult OPD patients visited the health facility (facilities) x 100	Shade black when less than 1.99% or greater than 7%
Smear positive (S+ve) patients diagnosed No.(%)	No. = No. of S+ve patients diagnosed  % = No. of S+ve patients diagnosed / no. of TB suspects examined x 100	—
Percentage of S+ve patients living in the district placed on DOTS	% = No. of S+ve patients put on DOTS / No. of S+ve patients living in the district	Shade black when less than 89.5%
Annualized total case detection rate per lakh population	Rate = (Total cases registered in the respective quarter x 4) / Projected population of the year in lakhs	Exclude all districts which started implementation in that quarter. Grey shade wherever blank
Annualized new S+ve case detection rate per lakh population and new S+ve case detection percentage (%)	Rate = (New S+ve cases registered in the respective quarter x 4) / Projected population of the year in lakhs  % = Actual rate / estimated rate (*) x 100	Exclude all districts which started implementation in that quarter. Grey shade wherever blank
Ratio of new S-ve to new S+ve patients	No. of new S-ve cases registered in the respective quarter / No. of new S+ve cases registered in the respective quarter	Shade black when greater than 1.25 or less than 0.35
3 month conversion rate of new S+ve patients (%)	No. of new S+ve cases smear negative at 2 months + negative at 3 months / Total new S+ve cases registered in the respective quarterly patient cohort x 100	Less than 84.5% with black shade Grey shade wherever blank
Cure rate of new S+ve patients (%)	No. of new S+ve patients cured / Total new S+ve cases registered in the respective quarterly patient cohort x 100	Less than 79.5% with black shade Grey shade wherever blank
Treatment success rate of new S+ve patients	No. of new S+ve patients (cured + treatment completed) / Total new S+ve cases registered in the respective quarterly patient cohort x 100	Less than 79.5% with black shade Grey shade wherever blank

\* Estimated rate: For every 1% of Annual Risk of TB Infection (ARTI), there are expected to be 50 new S+ve cases per 1,00,000 population per year. Hence with a national ARTI of 1.7%, in India 85 new S+ve cases are expected nationally per 1,00,000 population per year. Exceptions to this are Himachal Pradesh (115 / lakh), Kerala (50 / lakh) and Manipur (100 / lakh).

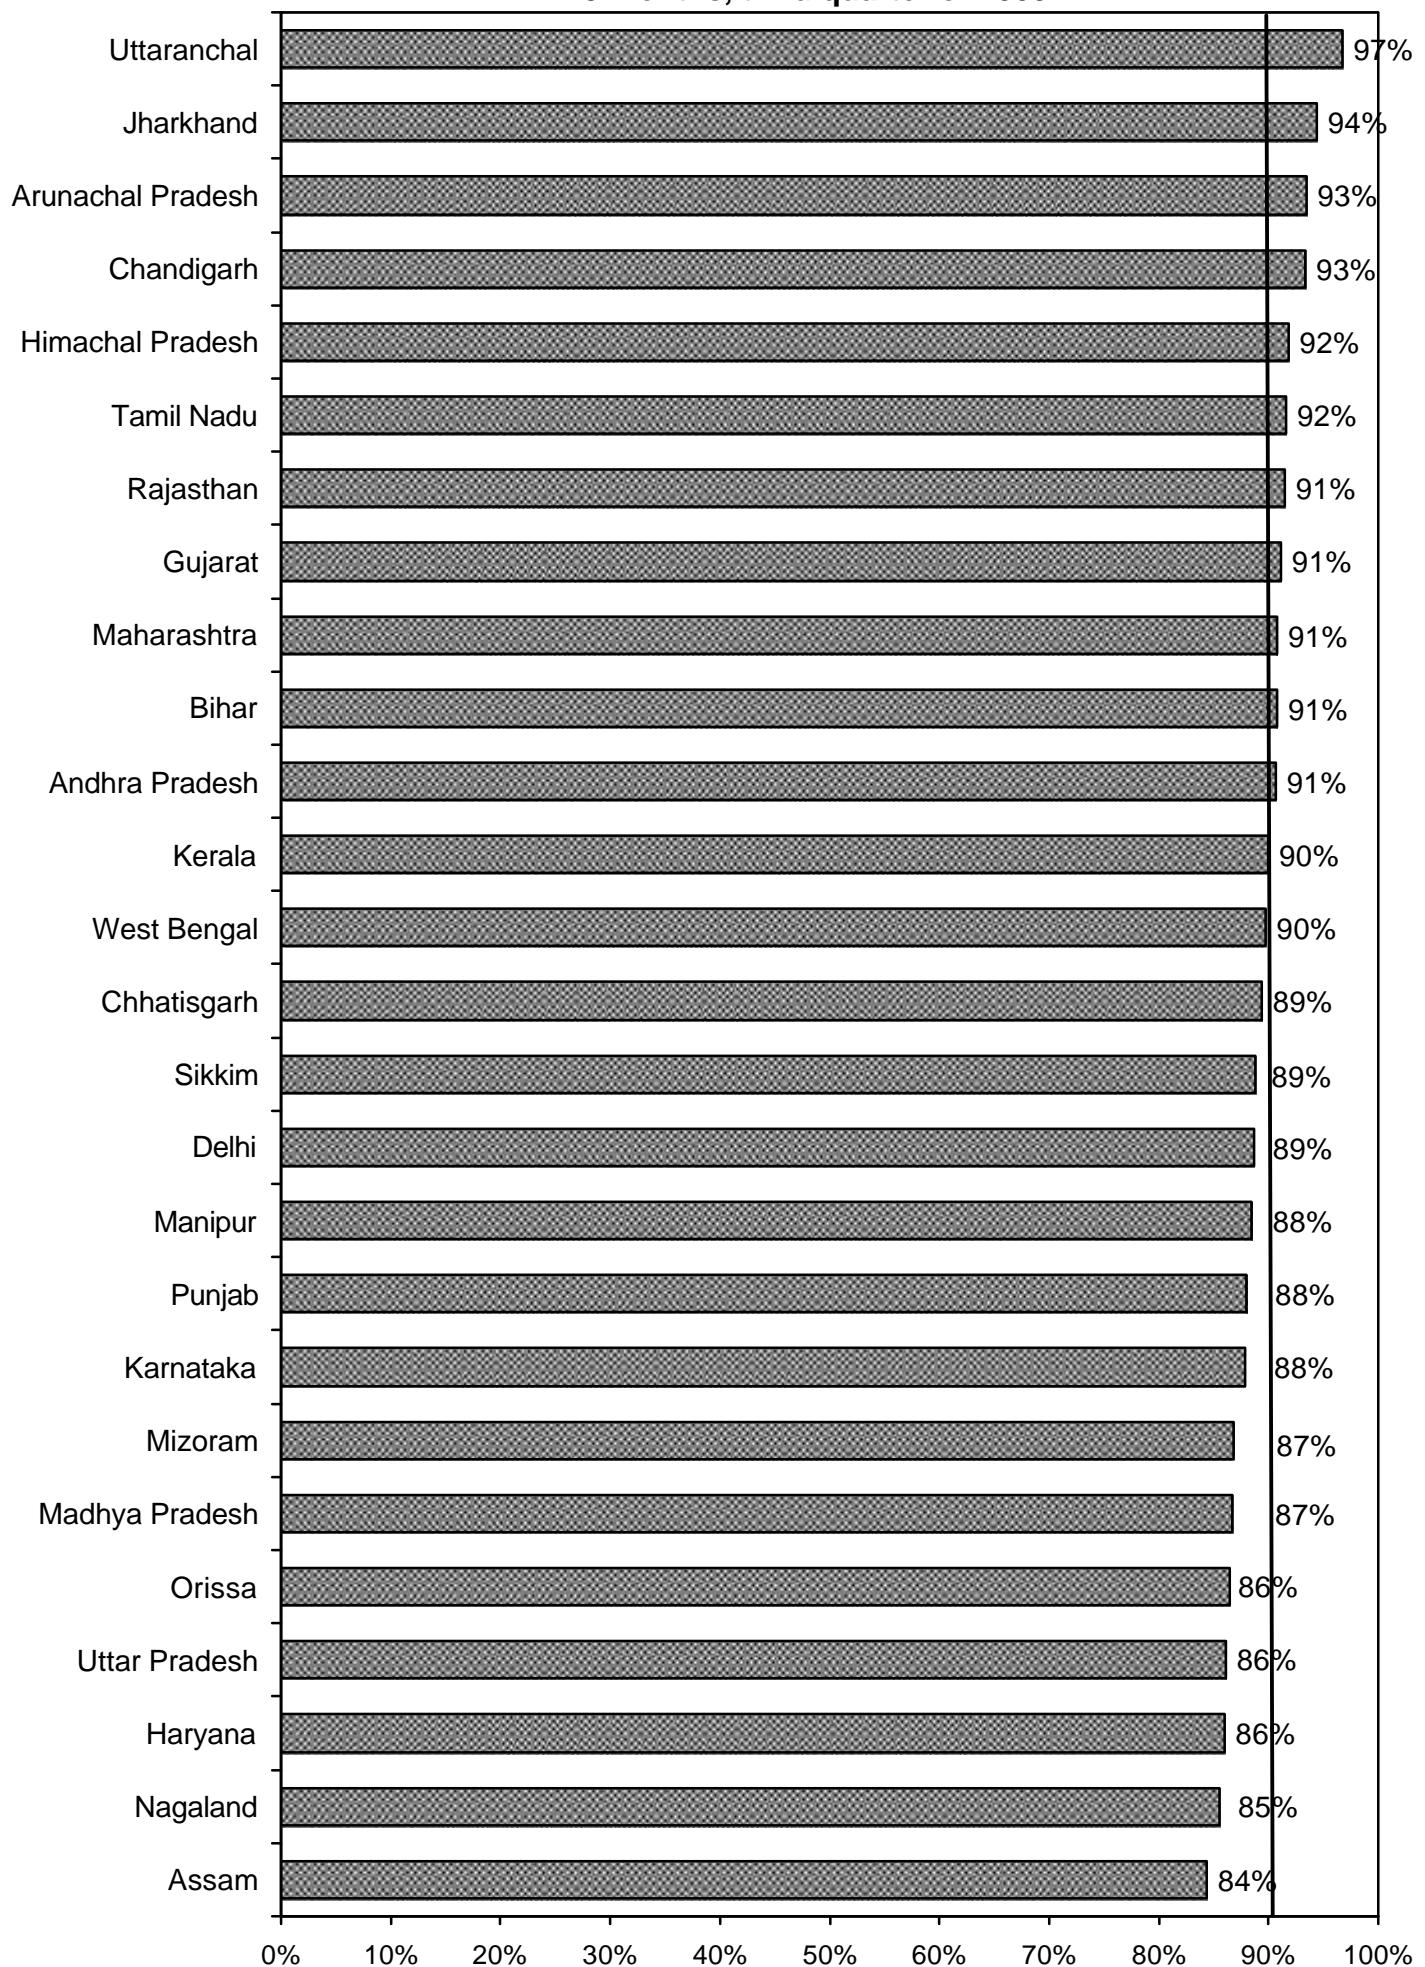

**Percentage of annual estimated new smear-positive cases detected,  
fourth quarter of 2003**
